

NOTICE OF APPLICATION FOR AN EXPLORATION LICENCE

Mineral Resources (Sustainable Development) Act 1990 – Section 15(5)

Mineral Resources (Sustainable Development) (Mineral Industries) Regulations 2019 – Regulation 22(1) and Schedule 1

1. Name and address of applicant(s):

Providence Gold and Minerals Pty Ltd
PO Box 440, Hove SA 5048

2. Contact details of applicant (for map and other information requests):

Melissa Say, Authorised Agent (as employee of Australian Mining & Exploration Title Services)
Mobile: 0429 787 593 Email: vic@amets.com.au

3. Applicant's Website (see notes) Further information about this application is available at the following websites: www.amets.com.au/victoria-tenements/ and www.earthresources.vic.gov.au/licenceapplications

4. Details of the application:

Application number: EL007469

Locality of the land to which the application relates: 20km west- northwest of Cressy, including town of Lismore

Approximate area of the application (Graticular Sections): 554

Date of the application: 1 April 2021

Term the licence is applied for: 5 years

Outline of the proposed programs of work: Desktop studies, community liaison, geophysics, mapping, geochemical sampling, drilling.

5. Objections:

Any person may object or comment to a licence being granted by:

- a. putting the objection or comment in writing; and
- b. including the grounds on which it is made
- c.

Objections or comments must be lodged within 21 days after the latest date on which the application was advertised and can be lodged online or posted to:

The Minister for Resources

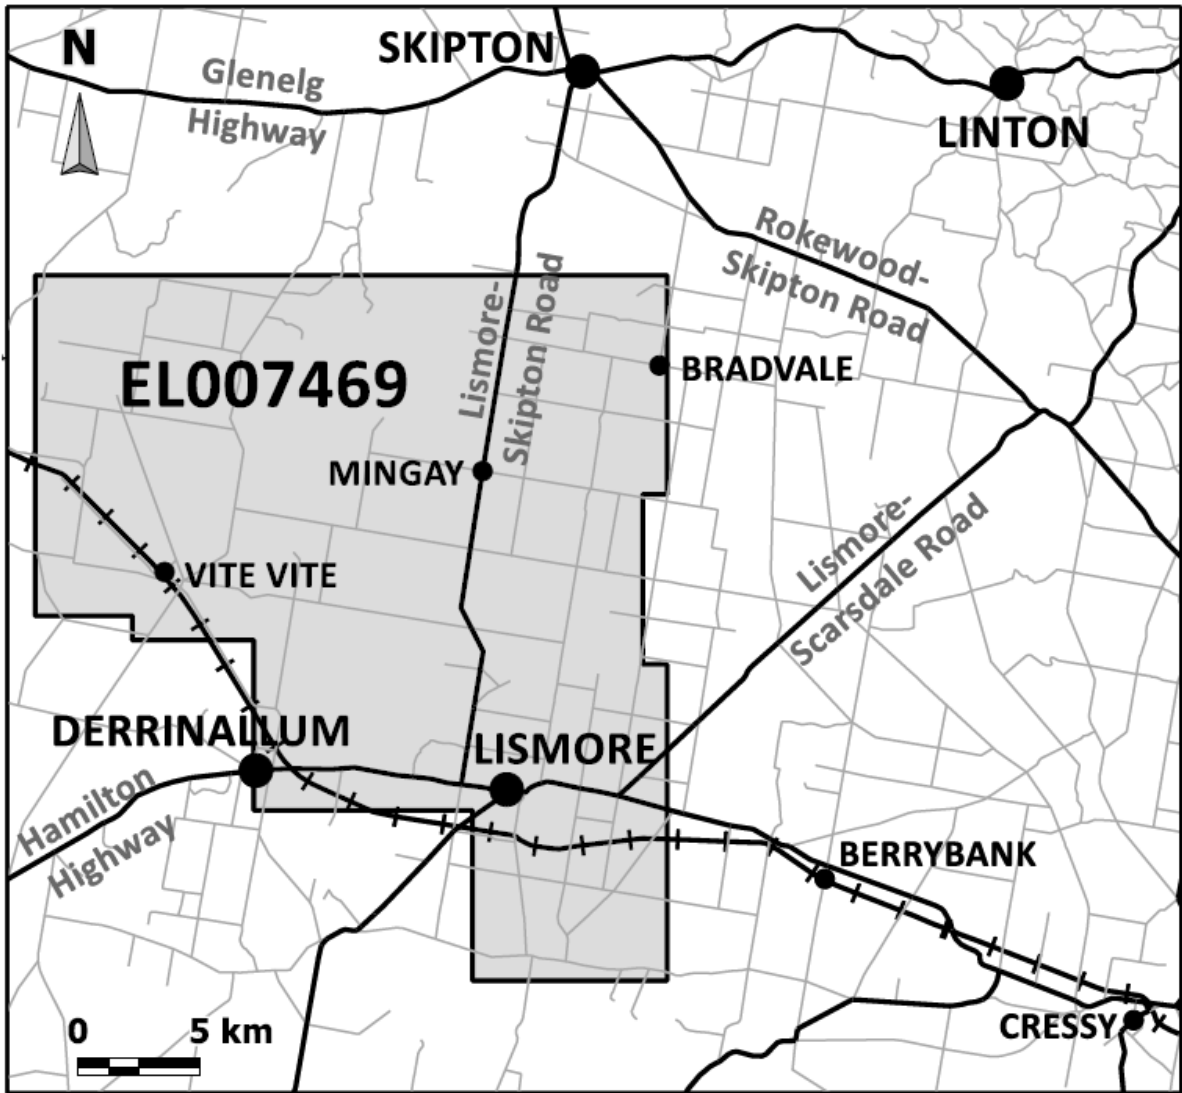

c/- Manager Licensing, Earth Resources Regulation, GPO Box 4509, Melbourne Victoria 3001

It is recommended that objections or comments are lodged online to ensure timely consideration:
<https://rram.force.com/ObjectionSubmission>

Enquiries can be made by writing to the Manager Licensing at the above address or by phoning the Earth Resources Information Centre on 1300 366 356.

6. Other information:

- a. Subject to other requirements being satisfied, an exploration licence, if granted, entitles the holder of the licence to explore and search for minerals in the relevant land, but does not entitle the holder to undertake mining.
- b. Further information regarding the requirements that must be complied with prior to work being undertaken is available on the department's Community & Land Use page: <https://earthresources.vic.gov.au/community-and-land-use>

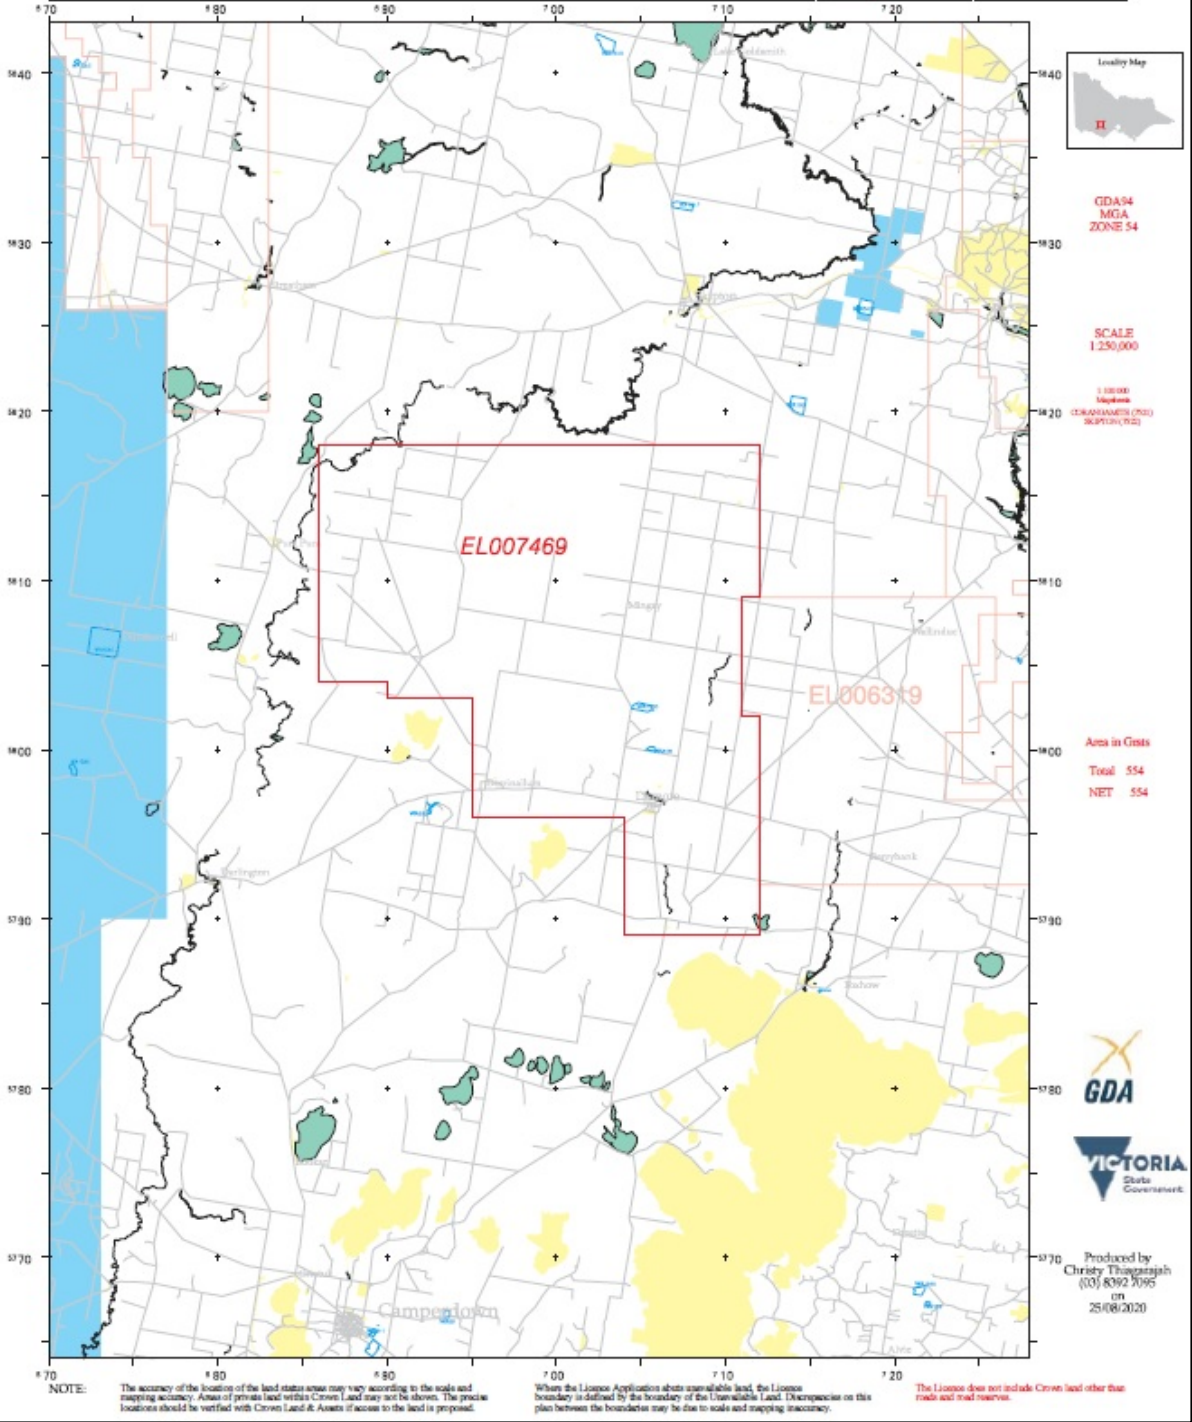

EXPLORATION LICENCE APPLICATION 007469

- Unavailable for Searching or Exploration or Mining MRSDA 1990 Sec 6. Includes National, State & Wilderness Parks and Reference Areas
- Exempted from being subject to Exploration &/or Mining Licences. MRSDA 1990 Sec 7. May be revoked by notice in the Govt Gazette.
- Restricted Crown Land. Schedule 3 of MRSDA 1990. Consent required to do work on the land.
- Other Crown Land
- Commonwealth Land. Subject to Commonwealth legislation.
- Exploration Initiative Area exempted for a limited time from being subject to Exploration and/or Mining Licences. MRSDA 1990 Sec. 7
- Land not included in the Licence due to a licence or licence application existing or having priority at the date of application.

NOTE: The accuracy of the location of the land status areas may vary according to the scale and mapping accuracy. Areas of private land within Crown Land may not be shown. The precise locations should be verified with Crown Land if access to the land is proposed.

Where the Licence Application abuts unavailable land, the Licence boundary is defined by the boundary of the Unavailable Land. Discrepancies on this plan between the boundaries may be due to scale and mapping inaccuracy.

The Licence does not include Crown land other than roads and road reserves.

Work Program

A timed schedule of activity is proposed as follows:

Year 1 -

Contact and liaison within the district, including with the local Shire Councils so as to establish good working relationships. Contact with principal landowners and communities in the district. Conduct detailed desk-based studies. Compilation of previous exploration work and assessment of this data, including geophysical data.

Preparation of suitable exploration plans based on GeoScience data, expected to be informed by the magnetic and gravity surveys. Existing geophysical surveys would be assessed for reprocessing and updated interpretation.

These studies would be expected to generate field programs, leading to prospective drill targets.

Preparation and submission of further plans expected to include gravity and drilling.

Geochemical soil sampling would be given a trial over both basalt and non-basalt covered terrain.

Year 2 –

Once community and regulatory aspects are completed, initial drilling would commence. Such might commence initially along established road reserves once targets are more accurately defined. This drilling would also test the optimal drill technique.

As drill results are returned, results are interpreted so as to compare results with the geophysics and to inform the next round of drilling. In the event of anomalous results being returned, there could be closer spacing planned where logging and geochemical responses indicate.

Year 3 –

For deeper targets, drill hole siting would be based on assessment of the combined datasets from historic research, geochemical and geophysical data along with all newly acquired data.

Year 4 –

Drilling is expected to be an ongoing activity each year. Samples derived from drilling will be considered for their mineralogical and metallurgical properties by a suitable laboratory should a resource potential be indicated.

Year 5 -

Further drilling programs, with potential additional geophysical surveying. Subject to results received, metallurgical testwork and product processing studies can be conducted. Favourable results would lead to indicative pre-feasibility studies.

Community Engagement and Environment Strategy

There is a legal requirement, S. 39A of the Mineral Resources (Sustainable Development) Act 1990 for a licensee to consult with the community. The provision reads: -

A licensee has a duty to consult with the community throughout the period of the licence by;

- a) sharing with the community information about any activities authorised by the licence that may affect the community; and
- b) giving members of the community a reasonable opportunity to express their views about those activities.

In addition, there is a strong moral and ethical case for licensees informing their local communities as to their plans in these communities and for licensees to listen to the views of the local communities.

In general terms, the licensee must establish the extent of the local community, work out an effective manner in which to communicate with the various members of the community, actually engage in an

on-going communications strategy and to effectively deal with the information that it was able to discover.

In general terms, the licensee's community engagement plan is broadly based on the following:

1. Identify individuals or groups which may be impacted by the operations on the licence This would involve the compilation of a list of adjacent landowners, persons living on or in the vicinity of the licence and other community groups which may be impacted by the operations. Groups such as the Victorian Farmers Federation or the local Field Naturalists Club. Government Departments, Federal, State or local, and other government bodies such as CMA's who have a particular interest in the land on which the licence is situated should also form part of the consultation group.
2. It will be necessary to identify the expectations or attitudes of these groups and individuals. Often a direct face to face approach is the best way to engage many members of the community.
3. The licensee will need to assess the impact of their operation on these individuals and groups. Following the consultation, the full impact would be assessed by guidelines provided by the Department.
4. An assessment will be made following the consultation as to what level of community input and involvement can be achieved. There are likely to be a range of matters which may need to be considered. Ideally, many of the ideas and suggestions will be mutually beneficial to both the licensee and the local community. Matters such as working hours or attitudes to working on days of high fire danger or working on hot and windy days may be matters which the local community could have views which need to be considered by the licensees.
5. Any contact or complaint will be noted in a complaints book, and the licensee will promptly make suitable arrangements to contact the complainant. Where possible, the matter would be settled between the two parties, but the local Mines Inspector or the Mining Warden may be requested to assist in resolving any issue or mediating on the matter.

The licensee will produce an information sheet or local newspaper advertising outlining the project and seeking community views and attitudes to the operation. Such interaction with the community will be used to identify any issues that may be arising from the operations on the licence and will attempt to accommodate the views of the stakeholders in dealing with any such issues.

The community is welcomed for their interest and input into ensuring that there is a minimum of adverse effects to the amenity of the area or the impact on the expectation of the community for the peaceful enjoyment of their local environment.

The licensee is mindful of the need to maintain these exceptionally good community relations and to ensure that the channels of communication between the licence holder and the community in which it operates are kept open. All discussion with the community is based on mutual trust and respect.

Environment Strategy

All exploration activities will be conducted in accordance with the Code of Practice for Mineral Exploration. All rehabilitation will be carried out as soon as is practicable after exploration activities have taken place and in line with the current Guidelines for environmental management in exploration and mining. Providence Gold and Minerals Pty Ltd will ensure all staff and contractors are aware of all site-specific environmental sensitivities, such as weeds and endangered flora and fauna and will act accordingly.

Providence Gold and Minerals Pty Ltd are committed to minimising disturbance and environmental impact where possible and will work in accordance with the Guidelines as determined by the Victorian Government. No wetlands, waterways or lakes will be impacted by exploration activities.
